

COOL TECHNOLOGY AT DA VINCI CLINIC FOR EFFECTIVE RESULTS

CoolSculpting® - a safe, affordable contouring treatment to reduce body fat cells - is now available at Da Vinci Clinic and we can't wait to share the good news with you.

Do you have areas of stubborn fat that just won't budge, no matter what exercise or diet you use? Love handles, muffin tops, annoying bulges...

CoolSculpting® is a revolutionary, non-surgical treatment that uses controlled cooling to crystallise fat cells in your body. These targeted fat cells will gradually die and disperse naturally. The procedure does not involve needles, surgery or downtime and it is performed at Da Vinci Clinic by a specialist nurse, following a consultation with one of our specialists, who will address your specific area of concern and determine the right number of sessions for you.

Da Vinci Clinic offers a carefully selected array of cosmetic, dermatologic and reconstructive options. Call us today to find out more about CoolSculpting® or any other of our non-surgical and surgical procedures.
